

Join us for the

Chesapeake Bay Summer Program

take technology outside!

explore

learn

advance

A ten day program in Maryland that includes enriching conservation experiences, visits to top colleges and universities, personalized college counseling, and hands-on instruction in the use of GPS data collection and GIS technology.

Program Highlights:

experiential investigation on the water.

Working aboard CBF's "floating classrooms," participants explore the diverse Chesapeake Bay watershed, a habitat few are able to witness. Participants conduct biological and chemical investigations; utilize critical-thinking skills; and develop action plans to help improve water quality.

training in geospatial technologies.

Field-based research, team projects, and hands-on training in geospatial technologies are combined to create a transformative learning experience that goes beyond the conventional classroom. Students will use GPS data collection, GIS, and mapping activities to learn about the Bay.

educational counseling.

Our personalized approach to educational counseling includes college visits, SAT prep, and individual sessions specifically designed to help guide students through the complex educational and college admissions process. Students will learn to leverage this experience for an admissions advantage.
